

**Load
Runners®**

**HEAVY-DUTY
IDLER ROLLER &
RAIL SOLUTIONS**

GLOBAL REACH. LOCAL SUPPORT.

Osborn designed the world's first non-needle roller bearing idler roller more than fifty years ago to solve an internal manufacturing challenge on the company's foundry equipment. Today, Load Runners is the world's leading idler-roller and rail solution, used in numerous industries from healthcare and primary metals to automotive and general industry.

Osborn is the global leader in surface treatment and finishing solutions, with more patents on products and processes than all other brush companies combined. Established in 1887 in Cleveland, Ohio, U.S.A., Osborn's innovative culture has produced numerous industry firsts --- including Load Runners® brand precision load-handling systems.

Choosing the right idler roller and rail solution for your application can make or break your bottom line.

Often the "unsung hero" in the application, idler rollers play a significant role in the overall success of any rail-riding operation. Properly specified, idler rollers optimize line speed and product handling, regardless of material run or machinery used.

If you're involved with product selection, operating parameters, or sourcing, contact the Osborn team for support throughout the entire design/specification/sourcing process.

Application Considerations:

The proper selection and application of power transmission products and components, including the related area of product safety, is the responsibility of the customer. Operating and performance requirements and potential associated issues will vary appreciably depending on the use and application of such products or components.

The scope of the technical and application data included in this publication is necessarily limited. Unusual operating environments and conditions, lubrication requirements, loading supports, and other factors can materially affect the application and operating results of the products and components, and the customer should carefully review its requirements.

Any technical support, advice or review provided by Osborn and its divisions with respect to the use of products and components is given in good faith and without charge, and Osborn assumes no obligation or liability for the advice given, or results obtained, all such advice and review being given and accepted at customer's risk.

What is the application environment?

Environmental conditions can impact the life and performance of load bearing roller assemblies. Applications with exposure to one or more of the following operating environments may require special consideration:

Terms and Conditions:

For a copy of Osborn's standard terms and conditions of sale, disclaimers of warranty, limitations of liability and remedy, please contact Osborn customer care. These terms and conditions of sales, disclaimers, and limitations of liability and remedy, apply to any person who may buy, acquire, or use Osborn (Load Runners, Cam Runners or Load Rail) referred to herein, including any person who buys from a licensed distributor of Osborn products.

WHAT'S YOUR Challenge?

Load bearing roller assemblies are designed to support moving (dynamic) loads or stationary (static) loads. The load that the rollers will be supporting can be communicated using the following terminology:

Radial Load: Load applied to 90 degrees with the bearing bore or axis of rotation.

Thrust Load: Load applied parallel with the bearing bore or axis of rotation.

Rollers in many applications experience a load comprised of radial and thrust load which can be referred to as **combination load**. This load may not be intentionally designed into the application, but a combination load can be created as a result of misalignment or other functions within the application.

What are the applied speeds?

The rate at which the moving object will be travelling can be communicated in two different ways, in distance per time (FPM, M/sec) for linear movement or in revolutions per minute (RPM) for rotational movement. Depending on the type of application, one of these will best communicate the applied speed.

What are the needs for location?

Load bearing roller assemblies facilitate the location of moving loads or the contact surface by allowing for specific movements and by limiting unwanted ones. Applications must be reviewed to determine the required **freedom of motion** and desired **constraint of movement**.

WE ARE Load Runners

Load Runners Load Guidance Systems for Precision Handling of Heavy Loads in Tough Environments

When reliability is paramount, combine the high capacity of Load Runners idler-rollers with long-lasting, rugged Load Rails®, to move your products, people, or process from Point A to Point B.

Designed To Endure Extreme Operating Conditions

Load Runners' treads are machined from high-alloy steel, then case hardened (Rc 55-60) for a wear-resistant outer shell and tough inner core.

Precision tapered roller bearings (larger sizes) and deep-groove ball bearings withstand heavy radial and thrust loads.

All Load Runners are tightly sealed and lubricated for life to withstand dirt, sand and moisture.

High-shear-strength studs feature a hex socket for easy installation, and thru-shafts eliminate the need for customer fabrication.

- Standard styles: plain, v-grooved, flanged, crowned, double-flanged, and flanged crown.
- Handle both radial and thrust loads
- Case hardened to Rc 55-60
- Lubricated and sealed for life
- Matching precision Load Rails hardened to Rc 60-65
- In-stock availability or short lead-time custom designs
- Backed by a professional, technical inside team

CUSTOM Engineered

In addition to the standard Load Runners idler-rollers listed in this catalog, custom tread profiles, studs and special features are available. A few examples include:

- Stainless steel treads, studs
- Special plating (zinc, chrome etc.)
- Non-metallic tread materials (urethane, nylon, etc.)
- Special seals
- Special lubricants
- Provision for re-lubrication
- Crowned profiles
- Solid lubricants
- Double-flange rollers

Consult Osborn with special features or requirements not listed.

Operation in Severe Environments

Temperature Extremes

Standard Load Runners idler-rollers are designed to operate in temperatures ranging from -30° F to +225° F (-34° C to +107° C).

Operation in extreme temperature environments as low as -40°F (-40°C) and as high as +325°F (+162°C) continuously requires special seals and/or lubrication provisions.

Moisture Extremes

Operation in wash-down or similar extreme-moisture environments may also require special lubrication provisions.

Consult Osborn for application assistance.

Bearing Disassembly (If Required)

Tapered-roller-bearing assemblies used in Load Runners idler-rollers are pre-set with custom-ground spacers for the correct running clearance. If a bearing assembly is removed and then reassembled, the same cups, cones and spacers must be used.

Bearing assembly components cannot be mixed and matched. Even new cups or cones cannot be substituted in an existing assembly.

Osborn does not recommend disassembly and does not provide separate component parts.

Application Considerations

The customer assumes responsibility for proper selection and application of Osborn Load Runners, Cam Runners and Load Rails. Technical advice or review provided by Osborn with respect to the use of Osborn products is given in good faith and without charge, and Osborn assumes no obligation of liability for the advice given. Advice provided is to be accepted at the customer's risk.

HIGHLY ENGINEERED Highly Regarded

Every Application Has Its Own Unique Requirements

Engineering expertise and manufacturing skills are what set the Load Runners brand apart. We collaborate with customers across the globe to solve their unique load-handling challenges all with one common goal: achieving optimum results. Before recommending a custom solution, we consider many specific attributes: moisture extremes, temperature, speed, loads, lubrication requirements, operating environment, and cycle counts.

In addition to thousands of standard products sold in more than 120 countries, Osborn offers local technical and customer support that's just a phone call/email away. No matter where you or your customers are located, you'll always have access to Osborn's application expertise and the industry's leading idler-roller/rail design and support team.

Superior Design Means Longer Life. Longer Life Means Lower Costs.

Osborn Load Runners are robust assemblies of carefully fabricated outer shells/treads and precision bearings fitted to high tolerance shafts. All Osborn Load Runners match the tread, shaft and bearings into a cohesive, highly engineered unit used in dozens of industries and hundreds of applications.

Manufactured in the USA, Load Runners feature heat-treated specialty steel, precision bearings, a maintenance-free lubrication and seal system, and a global network of sales support and application engineering expertise.

Osborn Load Runners are designed and manufactured using exacting engineering principles with an emphasis on achieving:

- Better balance
- Increased bearing life
- Less tread/outer shell wear
- Reduced power consumption
- Smooth performance
- Quieter operation

We Keep Things Moving

Osborn Load Runners are the ultimate heavy-duty load rail and idler roller solution in the industry, providing precision performance across numerous applications. Available in all standard configurations -- either metric or inch, stud- or yoke-style -- ranging in rolling sizes up to 12 inches, Load Runners help reduce your design time and lower overall material handling system costs.

Our design engineers provide custom solutions to handle any challenge.

Rollers are manufactured to accommodate multiple mounting arrangements. The two most common mounting arrangements are stud-type and yoke-type:

Through-Hole Mount Stud Type **Blind Mount Stud Type** **Captured Mount Yoke Type** **Through-Hole Mount Yoke Type**

For applications requiring precision alignment between a roller and contact surface, an eccentric style roller may be used to achieve uniform contact.

INDUSTRY SPOTLIGHT

Primary Metals

TOUGH ENVIRONMENTS REQUIRE TOUGH PRODUCTS...

A steel mill was experiencing premature bearing failure that it suspected was a lubrication problem. After nearly two years of frequently replacing bearings, the company called Osborn.

Once on-site, the Osborn field sales engineer confirmed a lubrication problem, but also identified a more urgent problem...the customer was using undersized rollers. Compounding the problem, the application included significant shock loads that were damaging the bearings almost immediately upon installation. After solving the shock load issue, Osborn configured a completely new solution with beefier, case-hardened eccentric Load Runners and used proprietary high-temperature lubrication. Before the change, the old cam followers were lasting less than two months. The mill's new Load Runners have been in service more than six months and they're still going strong.

Other related applications

- Foundries
- Mould Handling Equipment
- Steel Mills
- Coil Conveying Systems
- Heat Treat Furnaces
- Recycling Scrap Yards
- Shredders
- Aluminum and Copper Plants

RELIABILITY THROUGH PROPER ALIGNMENT...

A customer in an oilfield was experiencing an ongoing misalignment problem with their cam follower and rail system. After several failed attempts to re-align the rails on their own, they called Osborn.

The problem they faced is fairly common -- parallel rails with extended runs using plain cam followers and rail exclusively has a tendency to misalign. The solution was rather straight-forward: Osborn engineers specified v-groove cam followers and rail on one side, and plain cam followers and rail on the other. This new, dual configuration provided the additional "wiggle room" needed to help maintain system tolerances, and prevent premature failure. Best yet, as stock product, the replacement rails and Load Runners were delivered, installed, and performing flawlessly just two weeks after the order was placed.

Other related applications

- Coiled Tubing
- Injection Systems
- Power Tongs
- Fracking

KEEPING ASSEMBLY ON TRACK...

Load Runners are used on conveyor and handling systems in assembly plants and cylinder-actuated carriages on equipment, such as paint operations, sub-assemblies, automated storage and retrieval systems. High levels of weld spray and dirt combined with fluctuating ambient temperatures can spell disaster for idler rollers. Not only are Load Runners up to the operating environment, but they are designed to handle both high loads and speeds. Best yet, all Load Runners are tightly sealed and lubricated for life.

Other related applications

- Assembly and Paint Line Conveying Systems
- Automated Storage and Retrieval
- Robotic Welders

INDUSTRY SPOTLIGHT

Off-Highway Equipment: Agriculture, Construction, and Mining

KEEP YOUR MACHINE RUNNING STRONG...

...with Osborn Load Runners and Load Rails.

Osborn Load Runners have proven themselves in machines from sugar cane harvesters to haulage trucks, all manufactured by such companies as Caterpillar, Case, Komatsu, International, Liebherr, John Deere, Dresser, etc.

Approximately 20 percent of any off-road heavy machinery's purchase price is contained in the undercarriage. More importantly, nearly 50 percent of maintenance costs will go into maintaining it. We know that one weak link in a system can cause a problem. That's why many undercarriage systems are integrally designed using Load Runners and Load Rails®. Osborn engineers work with your design team so that all components are carefully matched in a performance profile (tolerance, strength, hardness, and wear limits) for optimum performance and product life cycle. Although wear can never be eliminated, you can prolong the wear life of components and minimize maintenance costs with the properly designed idler roller and rail solution.

Other related industries

- Construction
- Mining
- Pulp and Paper
- Sawmills

STUCK BETWEEN A ROCK & A HARD PLACE...

A large aggregate supplier was having premature cam follower bearing failure at the end of its heavy-duty material handling line. Loose material was falling onto the rails and repeatedly jamming the treads, causing excess heat and breach of seal integrity.

Osborn analyzed the application and changed out the quarry's rail and cam followers to a stock Load Runners V-groove configuration. The improvement over the previous solution was immediate and dramatic.

The resulting product performance was measured at more than five times that of the previous plain cam follower and rail combination. The company's investment in Load Runners translated into less downtime and increased productivity.

Other related applications

- Cement
- Concrete Batch Feeding Systems
- Hot Clinker Apron Conveyor
- Sand and Gravel
- Telescoping Conveyors and Stackers
- Screening Systems
- Coal
- Feeders, Hoppers, Bins and Gates

DESIGNED BY ENGINEERS FOR ENGINEERS...

Load Runners and Load Rails are proven performers in some of the world's most challenging applications. Through collaborative and visionary engineering on some of the world's large moveable structures, Load Runners have become the workhorse of the kinetic architecture world. Strong and sturdy, Osborn's heavy-duty, custom solutions have powered kinetic architectural projects across the globe with challenging load cases, including operable roofs from 80'–200' and operable walls as tall as 139'.

Featuring tapered roller bearings, Load Runners heavy-duty idler roller bearings handle both heavy radial as well as thrust loads. Maintenance-free units are lubed for life with seals to keep out sand, moisture, and other contaminants. Load Runners are manufactured in either inch or metric dimensions in virtually limitless geometries and tread configurations. Typical tread profiles are plain, flanged, or V-grooved.

Important Note For All Designers and Engineers:

To ensure any product selection performed provides the end users with the lowest total cost of ownership, we have provided a design submission sheet, located on page 90/91 of this catalog. This selection process may result in some dimensions of the selected product(s) differing from those stated in this catalog or on loadrunners.com.

In the interest of product development, Osborn reserves the right to change critical data at any time without prior notice. Dimensions shown are nominal only. Certified drawings are available upon request.

Other related applications

- Wall Units
- Set Design
- Retractable Doors / Ceilings
- Bridges, Gangways
- Satellite Dish / Telescope Positioning

PEAS & GREASE DON'T MIX...

From low-speed, quiet applications (for patient comfort) on medical equipment to high-speed, reliable, and maintenance-free pharmaceutical and packaging applications.

Osborn Idler Rollers can be engineered to meet the diverse conditions that are required in this ever expanding industry.

Other related applications

- Bakery Cooling Towers
- Drug Packaging Conveyors
- Can Processing Equipment
- MRI Machines
- Bottle-Filling Machines

For the above load calculations the radius at the end of tread is excluded.

Other sizes available upon request.

*Refer to stud hex socket size and INSTALLATION NOTES on pages 87-89.

Lock washer and jam nut available, for size see N dimension.

For special features and custom design considerations, see page 7.

LOAD CAPACITIES ARE BASED ON UNIFORM AND STEADY LOADING.

1 kg = 9,81 N = 2,21 lbs

LOAD RUNNERS

Stainless Steel

Concentric Stud Plain Style, Flanged, V-Grooved - Inch Sizes

Use where corrosive or other conditions make standard steel rollers unsuitable.

- All-stainless construction
- Corrosion resistant
- Tread 440C & hardened to 55-60Rc
- Stud & cap 300 grade stainless steel

Applications:

- Chemical Treatment
- Tank Building
- Food Processing
- Aerospace
- Marine
- Waste Treatment
- Pharmaceutical

Plain Concentric Stud

Flanged Concentric Stud

V-Grooved Concentric Stud

See page 83 for details of design recommendations for roller on rail.

LOAD RUNNERS

Nylon Tread Concentric & Eccentric Stud Plain Style - Inch Sizes

Cost-effective performance in applications requiring a non-metallic outer face.

- Seals out contamination
- Non-sparking
- Non-marking

Applications:

- Racking & Storage Retrieval Systems
- Food Processing
- Postal Systems
- Medical Equipment

LOAD RUNNERS CAM RUNNERS

Needle Bearing Alternative

Osborn Cam Runners are significantly different from conventional needle bearing style cam followers.

General Characteristics:

Cam Runners are manufactured with a composite synthetic tread and stainless steel stud. The composite tread consists of two different synthetic materials chosen to provide optimal characteristics for the outer wear surface and the inner bearing surface. The two synthetic parts are molded together to form a single mechanically bonded assembly that is mounted on the stud, eliminating the need for conventional seals and lubricants. The outer tread material offers high mechanical strength while the inner bearing material provides high lubricity.

The stud provides optimum life and corrosion resistance. Tread bearing wear is critically dependent on the hardness of the mating surface. When this assembly is used as a direct replacement for a conventional cam follower, the life will be optimized if the cam or other mating surface is within the range of 55 - 60 Rc. Softer or harder materials may result in decreased life, particularly under high loads. The mating surface must be free of grease, oil and abrasive contaminants.

This assembly is dimensionally interchangeable with conventional steel cam followers. Because of its unique construction, comparable load ratings are not applicable. In order to guide you in choosing applications, extensive testing has been utilized to develop life expectancies based upon continuous duty testing at various speeds and loads. In continuous duty operation under identical loads and speeds, the Cam Runner has been found to outlast conventional steel cam followers by an average of 10 times!

Bearing to stud clearance is greater than for needle bearing designs and will increase during early use and will stabilize after "wearing in"

Advantages:

- No lubrication required – ever!
- Non sparking and low electrical conductivity
- Thrust load tolerant
- Extended life, ideal for difficult-to-service-operations
- No lubricant leakage to contaminate your process
- Quiet operation resulting from no internal moving parts
- Wide range of operating temperatures
- ISO 9001 compliant

Not recommended for ambient temperatures above 250° F (121°C) , highly abrasive applications or repeated heavy shock loads.

Cam Runners provided with hex jam nut and lock washer.
LOAD CAPACITIES ARE BASED ON UNIFORM AND STEADY LOADING.
1 kg = 9,81 N = 2,21 lbs

LOAD RUNNERS

Load Rails - Metric Sizes (mm)

Osborn Load Rails® are made of high-strength steel and machined to tight tolerances, then cut to length and drilled to customer specifications. Osborn Load Rails® offer allowable rail loadings of up to 317450 N (71500 lbs) per roller. If not specified otherwise they are hardened on the rolling surface and available in two separate hardness ranges, find details below.

Other configurations and dimensions, steel grades, stainless steel types or specials according customer drawings are available on request. Please contact Osborn for further information.

To specify Osborn Load Rails, choose the hardness option (letter "L" for 55-60 HRC; letter "H" for 38 HRC), choose the style and size (MTV-1, MTV-2, MTP-1, etc), add the overall length in millimetres - XXXX below -, and add the hole mounting option after a dash. For length less than 1.000 mm use a leading zero.

(L/H)-(M/TV/TP/PV)-(1/2)-XXXX-(0/1/2/3)

Example: For rail in carbon steel 55-60 HRC, 1.500 mm length of V track, 75 mm high (MTV-1) and with hole mounting option # 1, the part number would read

L MTV-1 1500 1

Osborn Part No.	A	B	C	D	E	F	G	Mounting		
								Option #1	Option #2	Option #3
L/H-MTV-1 XXXX	75	40	6	14	27	25,8	20	11 Cap Screw	10 Soc.Hd.Cap Screw	10x1.5 Cap Screw
L/H-MTV-2 XXXX	100	50	6	19	39	37,2	25	13 Cap Screw	12 Soc.Hd.Cap Screw	12x1.75 Cap Screw
L/H-MTP-1 XXXX	75	40	6	-	27	-	20	11 Cap Screw	10 Soc.Hd.Cap Screw	10x1.5 Cap Screw
L/H-MTP-2 XXXX	100	50	6	-	39	-	25	13 Cap Screw	12 Soc.Hd.Cap Screw	12x1.75 Cap Screw
L/H-MPV-1 XXXX	38,2	40	-	-	-	40	-	M10 x 1,5 x L.15 Cap Screw		
L/H-MPV-2 XXXX	48,2	50	-	-	-	50	-	M12 x 1,75 x L.20 Cap Screw		

Rails longer than 3000 mm are delivered in length (cut at 90° angle).

Mounting: Holes are equally spaced 250 mm apart except for track length over 500 mm, which has 3 holes, equally spaced 150 mm apart. For track length less than 500 mm, holes are spaced 100 mm apart. All holes are spaced evenly from end. Customer specified hole patterns are possible. Please contact Osborn with your requirements.

Osborn Load Rails
are made of
high-quality steel

Mounting Option #1
Clearance hole for cap screw

Mounting Option #2
Clearance hole and counterbore for socket head cap screw and hi-collar lock washer.

Mounting Option #3
Tapped thru hole for cap screw

Maximum DESIGN FLEXIBILITY

Osborn Load Rails® are made of high-strength steel and machined to tight tolerances, then cut to length and drilled to customer specifications. Osborn Load Rails offer allowable rail loadings up to 71,500 lbs (317450 N) per roller.

Load Rail Profiles

To determine a part number of the requested Inch Size Load Rail, specify the profile, replace "XXXX" with the track length dimension, and add the appropriate mounting option code (see chart). For example: to specify a 4" high V-track 28-1/2" long with a clearance hole for a cap screw, the part number is LRTV-20284-1.

XXX	X
Track length in whole inches	Fractional track length
001 = 1"	0 = 0
002 = 2"	1 = 1/8"
003 = 3"	2 = 1/4"
004 = 4"	3 = 3/8"
005 = 5"	4 = 1/2"
006 = 6"	5 = 5/8"
etc.	6 = 3/4"
	7 = 7/8"

Mounting Options

Mounting holes equally spaced from rail ends on each option.

Part No	Measurement in Inches								Mounting		
	Lgth	A	B	C	D	E	F	G	Option 1	Option 2	Option 3

Track Alignment

Whether using our rail or yours, the track and roller should be aligned so that the roller tread lies flat on the track surface.

Osborn Load Runners® on Load Rail® Design Recommendations

Mounting locations are determined by matching the roller point diameter with the rail point dimension. ("F" dimensions on roller and rail pages.)

**Note: Other configurations and dimensions available.

Track Capacity

For steel track of 180,000 PSI tensile strength (Rc=40), refer to the track capacity chart to find the track load capacity for the style and size of roller to be used. For steel track other than 180,000 PSI tensile strength, first refer to the track capacity factor chart for the type of steel to be used. Then multiply the track capacity for the roller being used by the track capacity factor for the steel to be used.

TRACK CAPACITY*								TRACK CAPACITY FACTOR		
HPC + HPCA PLR + PLRY		HPJ + HPJA FLR + FLRY		HPV + HPVA VLR + VLRY		Track Hardness Rc	Tensile Strength	Capacity Factor

* Radial load only for tracks made of 180,000 PSI steel (Hardness Rc = 40)

Load Runners PART NUMBERING

Part Number	Description
PLR	Plain Load Runners (Inch)
FLR	Flanged Load Runners (Inch)
VLR	V-Grooved Load Runners (Inch)
CLRY	Crowned Load Runners Yoke (Inch)
SHA/SHB	Heavy-Duty concentric Shaft (Inch)
SHE	Heavy-Duty Eccentric Shaft (Inch)
PCR	Plain Cam Runners (Inch)
HPC	Metric Plain Stud
HPJ	Metric Flanged Stud
HPV	Metric V-Groove Stud
HPCA	Metric Plain Yoke
HPJA	Metric Flanged Yoke
HPVA	Metric V-Grooved Yoke
MSHA	Metric Heavy-Duty concentric Shaft

Extensions	Description
PLR(E)	Eccentric Stud
FLR(C)	Crown Tread
(F)FLR	Double Flange
VLR(S)	Stainless Steel
PLR (H)	High Temp
PLR(N)	Nylon
PLR (U)	Urethane
FLR(Y)	Yoke
(H)PJ	Metric

Roll With The Best. Buy All Of Your Rail And Idler-Rollers From Osborn.

Contact us today and find out how Load Runners rail and idler rollers will remedy your unique material handling challenges. Our web site features in-depth information, **CAD-drawings download**, full catalog, installation instructions, and more.

Let the Osborn team help you determine the best solution for your needs.

Load Runners INSTALLATION NOTES

Tightening Torque

STUD DIAMETER	DRY THREADS	LUBRICATED THREADS
Less than 5/8" / 16mm	15 ft. lb. / 20 Nm	8 ft lb. / 10 Nm
5/8"/16 mm to 1"/24 mm	50 ft. lb. / 68 Nm	25 ft. lb. / 34 Nm
Over 1" / 24 mm	100 ft. lb. / 136 Nm	50 ft. lb. / 68 Nm

Osborn Load Runners Recommended Installation Procedure:

WARNING: High voltage and rotating parts may cause serious or fatal injury. Be sure to turn off power to machinery. Read and follow all instructions. Be sure to properly apply pressure when press-fitting your Load Runners. Hammering directly on the bearing could result in bearing damage or personal injury.

While lack of lubrication causes shorter operating life and product damage, Load Runners are designed and lubricated for life. In some instances, there is a convention to re-lubricate your Load Runners. Use the torque chart to install nuts properly. Do NOT over- or under-torque nuts.

Stud-Style Installation Considerations

- Inspect the housing
 - Remove all burrs/sharp edges and clean.
 - Confirm housing bore diameter, insuring a snug fit with stud.
- Install stud into housing
 - Do NOT hammer Load Runners at any time.
- Install lock washer and jam nut
 - Do not tighten jam nut beyond torque specifications or damage may occur.
 - Use hexagonal hole (broach) with hex key to prevent the stud from rotating when the nut is tightened.

Blind Hole Mounting

Certain applications require blind hole mounting into tapped threads. Use the hex key to ensure adequate torque is applied.

Mounting Considerations

Mounting holes should be machined to the nominal stud size within ± 0.001 / ± 0.000 (± 0.025 mm / ± 0.000 mm) tolerance.

When properly aligned, the roller stud should slip into the mounting member. Do not force the stud into the mounting member as damage to the roller may occur.

When mounting rollers, do not torque the jam nuts beyond what is recommended or damage may occur. Be sure that the mounting member is of sufficient thickness to support the applied loads.

Yoke-Style Installation Considerations

Load Runners yoke-style idler-rollers offer considerable mounting flexibility. They can be installed on a bolt or thru-shaft between yoke brackets ("ears") which are fabricated as an integral part of the equipment, or in individual yoke brackets which can be bolted into position wherever needed.

It is important that the members which support the mounting bolt or thru-shaft are rigid enough to resist bending (which could cause uneven loading on the rollers) and strong enough to withstand the operational radial and thrust loads.

Osborn offers an exclusive line of heavy-duty thru-shafts designed specifically for use with yoke-style Load Runners idler-rollers. See pages 43, and 74-75.

Axial clamping of yoke-style rollers (through the bore) is required to prevent the bearing components from separating, causing loss of bearing adjustment and premature failure. The outboard end of the mounting bolt or thru-shaft should be allowed to float in the yoke ear to avoid "pinching" and restricting the idler-roller tread when the roller is clamped. (See drawings below).

Shaft Style A

See pages 43 & 74 for actual shaft dimensions.

For Roller Sizes: PLRY + FLRY 1 1/2" Thru 7",
VLRV 2 1/2" Thru 8 1/2"
and all metrics

Shaft Style B

See page 43 for actual shaft dimensions.

For Roller Sizes: PLRY + FLRY 8" Thru 10",
VLRV 9 1/2" Thru 11 1/2"

Flange Alignment

The shoulder on the flange end of a flanged yoke-style idler-roller serves as the dimensional reference point for accurate positioning of the roller flange with respect to the supported structure.

Orient each roller so that the flange is closest to the fixed (small diameter) end of the bolt or thru-shaft. (See Drawing.) When the bolt or thru-shaft is clamped, the reference shoulder will be pulled up tightly against the structure reference surface.

By mounting a string of flanged yoke-style rollers in this manner, all flanges will be properly aligned.

V-Grooved Alignment

The Chamfer Side (**Metric** rollers) resp. the sharp-radius corner (**Inch** rollers) indicate which shoulder should be used as a dimensional reference point for accurate alignment of a V-Grooved roller with respect to the supported structure.

Orient each roller so that the Chamfer Side (**Metric**) resp. sharp-radius corner (**Inch**) is closest to the fixed (small diameter) end of the bolt or thru-shaft. (See Drawing.) When the bolt or thru-shaft is clamped, the reference shoulder will be pulled up tightly against the structure reference surface.

By mounting a string of V-Grooved yoke-style rollers in this manner, all V-Grooves will be properly aligned.

Reference for Metric V-Groove-Yoke

Reference for Inch V-Groove-Yoke

Hex Socket Sizes

Inch		Metric	
Stud Diameter	Hex Socket Size	Stud Diameter	Hex Socket Size
≤ 1/2"	3/16"	≤ 12 mm	4 mm
5/8" – 7/8"	5/16"	14 mm	6 mm
1" – 1 1/4"	1/2"	16 - 30 mm	8 mm
≥ 2"	5/8"	≥ 30 mm	12 mm

Idle rollers are not recommended for repetitive and/or impact loads.
Shock and impact loads will reduce the life of the roller.
